### Overview of available risk tolerance levels in USD, valid from 29.12.2023 (previous values, valid from 30.12.2022)

**A**

**"Very low" / Fixed Income**

You strive for value preservation of your assets in the long term while accepting very low volatility of asset value.

| | |
|---|---|
| Expected annual return | Approx. 4.5% (4.5%) |
| Expected annual volatility | Approx. 4% (3.5%) |
| Maximum historical drawdown | Approx. -15% (-10%) |
| Longest historical drawdown | Approx. 3 years (2 years) |

**B**

**"Low" / Income**

You strive for value preservation of your assets in the long term while accepting low volatility of asset value.

| | |
|---|---|
| Expected annual return | Approx. 5.5% (5%) |
| Expected annual volatility | Approx. 5.5% (5%) |
| Maximum historical drawdown | Approx. -15% (-15%) |
| Longest historical drawdown | Approx. 3 years (2 years) |

**C**

**"Moderate" / Yield**

You strive for moderate appreciation of your assets in the long term while accepting moderate volatility of asset value.

| | |
|---|---|
| Expected annual return | Approx. 6% (6%) |
| Expected annual volatility | Approx. 7% (7%) |
| Maximum historical drawdown | Approx. -25% (-25%) |
| Longest historical drawdown | Approx. 3 years (3 years) |

**D**

**"Medium" / Balanced**

You strive for appreciation of your assets in the long term while accepting medium volatility of asset value.

| | |
|---|---|
| Expected annual return | Approx. 7% (6.5%) |
| Expected annual volatility | Approx. 9.5% (9%) |
| Maximum historical drawdown | Approx. -35% (-35%) |
| Longest historical drawdown | Approx. 4 years (4 years) |

# Abbreviations and explanations

## Overview of available risk tolerance levels in USD, valid from 29.12.2023 (previous values, valid from 30.12.2022)

E

### "Above average" / Growth

You strive for substantial appreciation of your assets in the long term while accepting above average volatility of asset value.

| | |
|---|---|
| Expected annual return | Approx. 8% (7.5%) |
| Expected annual volatility | Approx. 12% (12%) |
| Maximum historical drawdown | Approx. -45% (-45%) |
| Longest historical drawdown | Approx. 4 years (4 years) |

F

### "High" / Equities

You strive for substantial appreciation of your assets in the long term while accepting high volatility of asset value.

| | |
|---|---|
| Expected annual return | Approx. 9% (8.5%) |
| Expected annual volatility | Approx. 15.5% (15%) |
| Maximum historical drawdown | Approx. -55% (-55%) |
| Longest historical drawdown | Approx. 6 years (6 years) |

## Risk tolerance and methodology

**Risk tolerance** : The degree of risk a client is prepared to accept in order to achieve an expected return. Risk tolerance levels are based on model investment strategies ranging from "A - Fixed Income" (very low risk tolerance) to "F - Equities" (high risk tolerance). The simulation of the risk/return characteristics uses historical data and is indicative only.

**Expected annual return** : An expectation for the average return of a model investment strategy / portfolio / product that is derived by means of a suitable statistical method based on historical performance data as well as capital market expectations.

**Expected annual volatility** : The volatility is a measure of the fluctuation of a model investment strategy / portfolio / product over a defined period and is measured as a standard deviation of the average or expected annual return. It is derived by means of a suitable statistical method based on historical performance data as well as capital market expectations.

**Maximum historical drawdown** : The maximum historical drawdown is the maximum loss of a model investment strategy or its highest relative fall during a period observed. It is a worst-case scenario based on historical data that occurs when investments are bought and sold at the worst possible time.

**Longest period of a historical drawdown** : The longest period of a historical drawdown of the model investment strategy is an indication of the minimum time required to weather the short-term losses and fluctuations of the portfolio based on historical data.

**Risk information** : The statements and figures shown above are for illustrative purposes only and intended to help identify a potential investment strategy suitable for the client's investment objectives and risk tolerance. Figures shown are gross values excluding fees and taxes (e.g. transaction fees, mandate fees, surcharges). Depending on the market situation and the investment selection, the actual volatility/return of a portfolio may exceed or fall below the expected volatility/return. The reporting institution recommends selecting a risk tolerance that is in line with the client's financial situation and ability to bear risk.

# Abbreviations and explanations

### Asset allocation

**General information** : Positions in your portfolio will, if possible, be unbundled, unless unbundling is not possible owing to insufficient information or for product-specific reasons. Please note that the asset structure shown is only indicative and that rounding differences may occur.

**Unbundling** : Unbundling is where an investment instrument (such as an investment fund) is split up into the asset classes, exposure currencies, countries, regions and sectors in which it is invested. For instance, a bundled CHF strategy fund that is invested in multiple asset classes and currencies is assigned to the 'Other' asset class with CHF as the trading currency. Once it has been unbundled, the investment fund is broken down into its constituent asset classes (e.g. 50% equities, 50% bonds) and exposure currencies (e.g. 80% CHF, 20% USD).

**Liquidity** : Asset class containing investment instruments with main exposure in the money market investments and FX markets. This asset class includes cash or term deposits, money market investments and currency certificates/derivatives.

**Bonds by rating** : This analysis only contains direct investments, structured products and warrants.

**Asset allocation** : Asset classes are categorized as follows:

**Bonds** : Asset class containing investment instruments with main exposure in the fixed income markets, i.e. interest rate and issuer risks. This asset class includes convertible bonds and structured products with category "Protection".

**Equities** : Asset class containing investment instruments where the stock market is the main risk driver, i.e. exposure to corporate, region or sector risks. This asset class includes listed stocks from energy, commodity and real estate companies.

**Hedge funds & private markets** : Asset class containing investment instruments, where risks and performance are mainly based on investment skills and expertise of their investment managers rather than the exposure to a specific market segment and where liquidity is lower than for traditional asset classes.

**Real estate** : Asset class containing investment funds and structured products with real estate character.

**Others** : Asset class which is mainly used for funds or structured products with mixed exposure, as well as for investment instruments which do not belong to one of the existing asset classes.

# Abbreviations and explanations

## Performance

**Performance** : The change of the portfolio value converted into a percentage gives the total return. In addition to price gains/losses, this includes interest earnings (with accrued interest) and dividend payments. Deposits and withdrawals are weighted using either the "MWR" or the "TWR" method.

**Net performance** : Performance after deduction of taxes as well as transaction and portfolio fees.

**Money weighted rate of return (MWR)** : The performance is calculated by dividing the amount of earnings and capital gains/losses by the average capital invested. The timing of deposits and payments has an influence on the average amount of invested capital.

**Time weighted rate of return (TWR)** : The performance is calculated by linking the performances which have occurred between the inflows or outflows, thereby neutralizing the influence of inflows and outflows on performance.

**Retroactive bookings** : Retroactive bookings can result in statement calculations deviating from earlier versions. The statement of assets lists the information available on the date on which the statement of assets was created for the relevant valuation date.

## Overview of income

**Source views** : The profits and losses are reported in the portfolio in which the positions in question are held.

**Accrued interest** : In the overview of profit and loss, this includes interest accrued through purchases or sales and delivery or receipt of interest-bearing investment instruments.

**Retroactive bookings** : Retroactive income and expenses are recalculated as of the reporting date, therefore retroactive bookings can lead to changes compared to previous reports.

**Detailed report** : If needed, a detailed report can be ordered.

**Positions overview** : In the asset analyses by position view, all investment instruments are allocated to a single investment category.

# Abbreviations and explanations

### Detailed positions

**SI label** : Sustainability characteristics of an investment instrument

**ESG multiple approaches** : Strategies that incorporate several sustainable investing approaches in the portfolio construction and investment process (for example, ESG leaders and improvers). Also applies to cross-asset solutions based on the sustainable investing strategic asset allocation.

**ESG thematic** : Strategies that invest predominantly in companies that sell products and services that tackle a particular environmental or social challenge, and/or whose businesses are particularly good at managing a single ESG factor, such as gender equality.

**Securities with ESG Leader attributes** : Equities or bonds that have been selected in line with the investment office view on ESG leaders approaches.

**Securities with ESG Thematic attributes** : Equities that have been selected in line with the investment office view on ESG thematic approaches.

**Gross profit** : is calculated as follows:

**Market gain** : Market price compared to average cost price in the reporting currency (excl. monetary benefits).

**Exchange gain** : Exchange rate compared to average buy exchange rate in the reporting currency.

**Unrealized P/L** : Market value compared to average cost value in the reporting currency (excl. accrued interest). For standard and exotic options on foreign exchange and precious metals, "Unrealized P/L" is same as the market value.

**Prepayment for fund subscription** : Payment has been effected, allocation and delivery of securities is outstanding.

### Private Markets

**Private Markets** : Remaining Commitment is calculated as follows: L.P.: For positions held in sponsored Private Markets funds with a Limited Partnership structure. Subtract the Total Capital Called amount for the position from the Total Commitment amount for the position. Ltd.: For positions held in sponsored Private Markets funds structured as corporations (Ltd.). Firstly subtract the number of Outstanding Shares from Total Commitment number of shares, then add the number of Redeemed Shares to this figure.

### Transaction list

**Content** : Only bookings from the period selected that are already known and booked in the system are displayed.

**Transaction gain** : Transaction price compared to average cost price in the reporting currency (excl. monetary benefits).

**Exchange gain** : Exchange rate compared to average buy exchange rate in the reporting currency.

**Realized P/L** : Transaction value compared to cost value in the reporting currency (excl. accrued interest).

**Prepayment for fund subscription** : Payment has been effected, allocation and delivery of securities is outstanding.

**Pending bookings** : The balance may contain bookings which will be credited or debited in future.

**Maturities** : This module shows known capital maturity repayments, income, dividend payments and distributions from securitized investments like money market, bonds, shares and investment funds.

## Portfolio Health Check

**Analysis by asset class** : This portfolio health check monitors the portfolio by asset classes in comparison to the defined bandwidths of the applied investment strategy according to your selected risk tolerance. In reference to the strategic asset allocation framework, the bandwidths for six asset classes are calculated for the available investment strategies. Asset classes in scope are Liquidity, Bonds, Equities, Hedge Funds & Private Markets, Real Estate as well as Precious Metals & Commodities. When monitoring the asset allocation, the asset class of the investment instruments is usually considered. For funds and structured products - subject to data availability and quality - the assessment is performed on a more detailed basis and includes the underlying investments' asset class exposure.

**Risk/return analysis of the portfolio** : The chart compares the risk level of your current portfolio with the investment strategy you have chosen. The further your allocation is to the right, the higher the financial risk. Please consider that every investment has risks. Financial losses result primarily from changes in the price of a financial instrument or due to the insolvency of a debtor. If risk is high, the probability of a high loss automatically increases. The investment strategy provides an indication of your risk tolerance according to the information you provided. An appropriate range for the asset classes is defined for each investment strategy.

**Instruments with negative view** : This section lists investment instruments which, in the opinion of research or product specialists, could suffer from a negative impact on valuation, a substantial loss, or which have an increased probability of a total loss.

**Bonds with a low rating** : This section lists bonds that have been given a rating below "Investment grade", i.e. lower than BBB- (Standard & Poor's) or Baa3 (Moody's). The ratings reflect the external rating agencies' evaluation of the creditworthiness of entities (governments, corporates) which issue debt in public markets. The ratings further represent their expectation of the likelihood that the entity will be able to repay both the principal and interest as they become due.

**Not monitored instruments** : This section lists equities, bonds, investment funds, structured products and ETDs which are not covered by research or product specialists, and are therefore not monitored or evaluated. In addition, investment funds are listed where no performance analysis is carried out and where no official information flow takes place between the fund manager and the reporting institution. Investment instruments in this section do not form part of the quantitative and qualitative control process.

**Risk analysis** : This portfolio health check monitors the expected volatility of your portfolio in comparison to the volatility bandwidths of the applied investment strategy according to your selected risk tolerance. Portfolio volatility is calculated as expected long-term volatility in a business cycle incorporating the forecast of the investment office. Please be aware that monitoring the risk/return for your portfolio depends on product information that is not always available or not in sufficient quality. Therefore, the performance of aforesaid checks cannot always be ensured for certain investment instruments (e.g. some structured products and collective investment schemes).

**Use of borrowed capital** : Investment of a loan granted by a bank (by overdrawing an account or depositing and pledging securities).

**Evaluation date** : Unless indicated differently, the data valid at the date of the statement of assets will be considered. If the dates are different or if the statement of assets is produced more than one day after the date it refers to, the data used for the calculation may deviate from corresponding data in other sections of the statement of assets.

**Bulk risks** : This Portfolio Health Check monitors the allocation to a single undiversified investment instrument in relation to the gross asset value of the portfolio. A bulk risk occurs when the weight of an instrument exceeds a predefined threshold based on your risk tolerance: A and B - 10%, C and D - 15%, E and F - 20%, 0 - 100%.

**Issuer concentrations** : This Portfolio Health Check monitors the asset allocation to a single issuer of investment instruments (e.g. equities, bonds, structured products) in relation to the gross asset value of the portfolio. An issuer risk concentration occurs when the weight of a single issuer exceeds a predefined threshold based on your risk tolerance: A and B - 15%, C and D - 20%, E and F - 30%, 0 - 100%.
